

# Route Planning

## Save time and fuel with optimized planning

The route planning module automatically generates the optimal planning – based on the geographical location of tasks. This means that you spend less time on planning, but also, that you can cut down on mileage driving, to minimize both driving time and fuel consumption.

With more efficient route plans, employees in the field can spend less time in the car and more time with customers.

You also get a more precise indication of how much time is to be spent driving, and thus when you show up at the customers. That strengthens the overall customer service experience.

When all employees in the field save time on driving every day, it makes a big difference on both fuel consumption and the environmental impact.

*“We have only just begun but I can already see that the time I spend on planning is reduced by 75%.”*

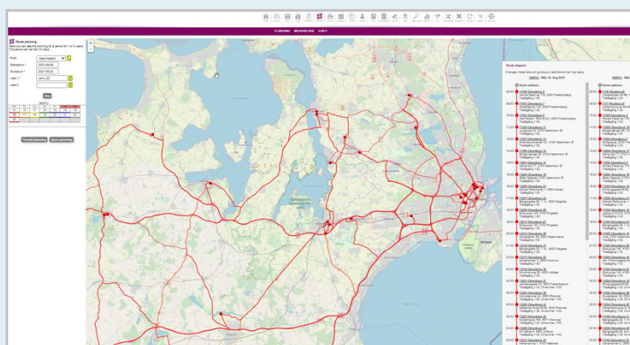

Carit Albertsen, Controller at CleanTech Danmark

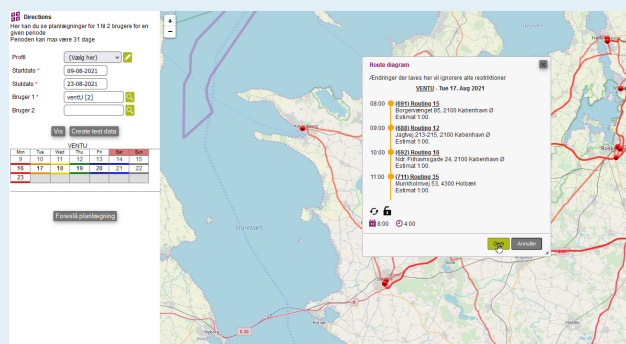

### Functionality:

- See the geographical location of tasks
- Generate better routes automatically, that minimize driving time
- Plan with flexibility and choose whether tasks should be performed on fixed days or if they can be moved
- Schedule tasks for one or two employees at a time
- The auto-generated routes can easily be corrected with drag-and-drop

# Route Planning

The route planning provides a visual overview in real time

Automated planning based on task parameters and locations

## Advantages

### Better overview

The geographical visualization of the location of the tasks gives you a better overview of tasks and working days.

### Increased productivity

Automatic route planning significantly reduces the manual planning work and reduces the driving time between tasks, so that both the employees in the office and the employees in the field have more time for other things.

### Stronger Environmental Profile

When you spend less time driving, you save fuel and reduce the company's negative environmental impact.

### Strengthen the Customer Experience

The route planning module gives you better estimates of driving time between tasks, so you know how many customers you can reach and when you show up.
